

**New:
Luscii Timeline**

The right information
at the right time

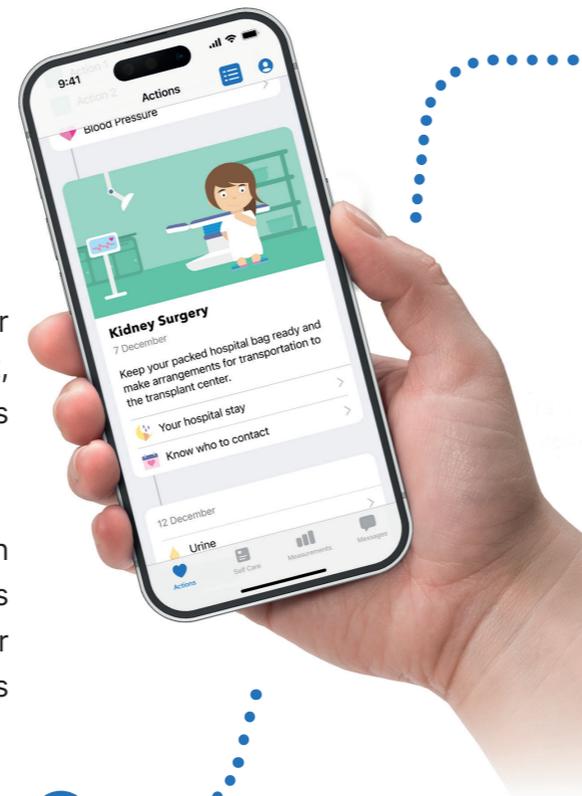

Luscii
creating space for care

SMALL BITS OF INFORMATION AT RELEVANT MOMENTS

Give your patients an active role in their care journey

Wouldn't it be nice to provide patients with insight into their care journey? A timeline with all the steps they can expect, visually represented and dynamically updated with small bits of information automatically provided at relevant moments.

Luscii Timeline® acts as a coach for patients, either as an interactive brochure or linked to home measurements. This ensures that patients are well-informed throughout their entire care journey, and allows you to monitor their progress and ensure everything is going well.

INSIGHT AND EMPOWERMENT FOR EVERY PATIENT

Personal care timeline with the right information at the right time

Information that is understood

- Small bits of information at a time
- Notifications at relevant moments

Personal in everyone's care journey

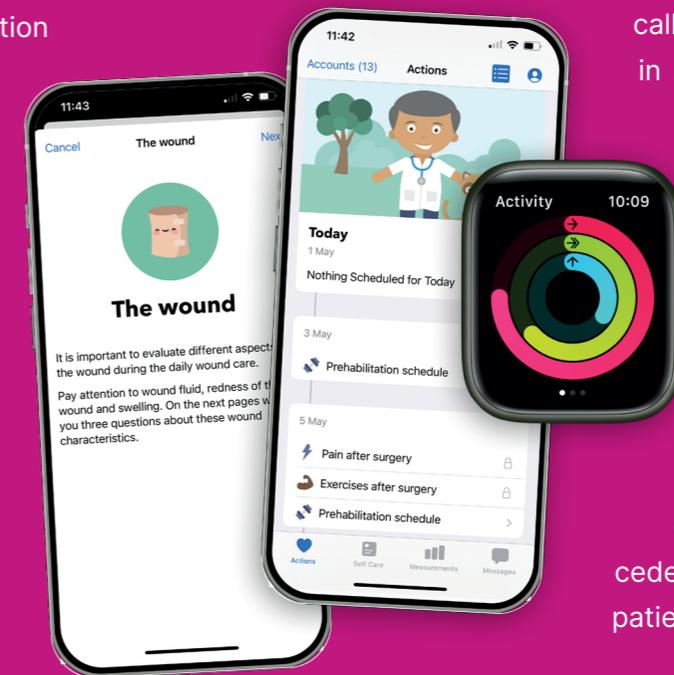

- Automatically triggered after home measurements
- Pushed at specific dates or care moments

Can be used on the waiting list, during treatment, and in aftercare or rehabilitation!

INSIGHT MEANS TRUST AND EMPOWERMENT

Good preparation is half the work

Luscii Timeline® empowers patients by giving them control over their care journey. A graphic timeline allows patients to scroll through and gain insight into all the steps of their journey. Push notifications provide information in small, easily digestible bits at moments when patients are paying attention. This may include a video about the day of surgery, a short checklist for consultation preparation, or e-learning about medication if a home measurement is elevated. By playing an active role in their care process, patients can make decisions when possible and take charge of their own health. That is **true patient empowerment!**

FROM WAITING LIST TO FOLLOW UP

Provide healthcare services with a smile

We all want service with a smile, and with **Luscii Timeline®**, it's now possible in healthcare too. This is great for patients and can improve medical outcomes. You can offer patients waiting list therapy, like Dr. van Dijken at OLVG Amsterdam, and keep them in view. Or coach patients with "Fit4Surgery," like Dr. Patijn at Isala hospital. The care timeline in the app automatically adapts to planned moments in each phase, including prehabilitation and nutritional advice beforehand. You can provide extra information and monitoring just before the surgery, and after discharge, you can offer a multimedia rehabilitation program to help patients recover quickly. By offering this unprecedented service, you'll give your patients the best possible care.
